                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a chimera alpha BNAC polynucleotide that encodes a chimeric alpha BNAC polypeptide. The polypeptide is useful for CC preventing protein aggregation. The polypeptide is also useful for CC increasing the shelf life of proteins of pharmaccutical value. The CC polypeptide shows an increase in accessible hydrophobic regions, forms CC larger size oligomers, shows an increase in intersubunit interaction, CC forms larger aggregates, forms larger porous oligomers and shows CC increased ellipticity as compared to eye lens crystallins alpha A and CC alpha B. The tryptophan residues in the polypeptide are less solvent CC accessible as compared to those of eye lens crystallins alpha A and accessible as compared to those of eye lens crystallins alpha A and alpha CC ranging between 3 - 6 times that of the eye lens crystallins alpha A and CC alpha B. The present sequence represents the chimera DNA that encodes to the numan alpha BNAC crystallin

                                                                                                                                                                                                                                                                                                          The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present semiger to recent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            04-FEB-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC The invention relates to a novel method of predicting at least one toxic CC effect of a compound. The method comprises a gene expression profile of a CC tissue or cell sample exposed to the compound, and comparing the gene CC expression profile to a database comprising at least part of the data or CI information given in the specification. The methods are useful for CC predicting at least one toxic effect of a compound, predicting the renal CC confectly of a compound, or identifying toxicity markers in tissues or CC cells exposed to known renal toxin. The genes are useful as toxicity CC markers in drug screening and toxicity assays, in monitoring disease or CC physiological states, or disease progression. This polynucleotide CC represents a rat DNA sequence relating to the toxic database CC described in the specification. NOTE: The sequence data for this patent CC cells exposed to form part of the printed specification, but was obtained in CC electronic format directly from the World Intellectual Property

                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-APR-2002;

Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed

Claim 1; SEQ ID NO 1419; 239pp; English

Gaps

294

cc cells. Also included are methods of predicting at least one toxic effect
CC cells. Also included are methods of predicting at least one toxic effect
CC of a compound or progression of a toxic effect, preferably the
CC hepatotoxicity of a compound, comprising detecting the level of
CC expression in a tissue or cell sample exposed to the compound of two or
CC more genes listed in the specification, where differential expression of
CC the genes is indicative of at least one toxic effect or progression. The
CC method can also be used to identify an agent which modulates the toxic
CC response and predict cellular pathways that a compound modulates in a
CC cell. The methods utilise a set of at least two probes (on a solld
CC support in kit form), where each of the probes comprises a sequence that
CC specifically hybridises to a gene listed in the specification, a computer
CC system comprising a database containing information identifying the
CC expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC set of genes comprising at least two genes listed in the specification,
CC and a user interface to view the information used to present information
CC identifying the expression level in a tissue or cell of at least one gene
CC sisted in the specification. The method is used to present information global
CC hence in means a provided to the method is useful for elucidating global The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxin. The genes may be used as toxicity markers in drug screening and toxicity assays. The genes and expression information may be used as diagnostic markers the

correplacement of one or more regions of an sHSP with the corresponding of region from a second sHSP can improve the activity compared to native SHSPs. In a particual rembodiment of the invention, the hybrid chaperone of sHSPs. In a particual rembodiment of the invention, the hybrid chaperone of sHSPs. In a particual rembodiment of the invention, the hybrid chaperone of shaperone of the invention can comprise of family. The invention also encompasses methods for stabilising proteins of such as enzymes, therapuetic proteins, diagnostic proteins, reporter of proteins or antibodies, their fragments or conjugates in an aqueous solution using hybrid protein associated with the above hybrid protein comprising at least one protein associated with the above hybrid protein chaperone; nucleic acids and vectors encoding a hybrid protein chaperone; cand the coexpression of a recombinant protein of interest and a hybrid protein chaperone; cand the coexpression of a recombinant protein of interest and a hybrid protein chaperone; cand the coexpression of a recombinant protein state and a hybrid protein chaperone; cand the coexpression of a recombinant protein state and a hybrid protein chaperone; or identification of proteins that are in the correct protein conformations (e.g., cardiomyopathies, cataracts or the treatment of such diseases), or for the manufacture of a medicament for the treatment of such diseases), or for the manufacture of a medicament for the treatment of such diseases). The present sequence represents a mutant can the form of fee ADE75375) to generate a unique Aval restriction site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          proteins and/or protein activities. Protein chaperones (also known as heat shock proteins) are divided into 4 families on the basis of their primary sequence and chaperone properties: HSP90, HSP70, HSP60 and sHS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New hybrid protein chaperone (e.g. heat shock protein) useful for stabilizing proteins and/or protein activities, or as an agent to prevent protein aggregation, or for treating diseases involving altered protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (small heat shock protein). The invention is based upon the finding that among the sHSP family, which have a general structure of a cenral domain (called the alpha-crystallin domain) flanked by N and C-terminal regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a hybrid protein chaperone for stabilising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Fig 12; 45pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-865571/80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23-APR-2002; 2002GB-00009334.

            CC proteins and/or protein activities. Protein chaperones (also known as comparing the shock proteins) are divided into 4 families on the basis of their CC primary sequence and chaperone properties: HSP90, HSP70, HSP60 and sHSP CC (small heat shock protein). The invention is based upon the finding that CC (among the sHSP family, which have a general structure of a central domain CC (called the alpha-crystallin domain) flanked by N and C-terminal regions, CC replacement of one or more regions of an sHSP with the corresponding CC region from a second sHSP can improve the activity compared to native CC sHSPs. In a particualr embodiment of the invention, the hybrid chaperone CC is a hybrid sHSP designated alphab-HSP27 comprising the N-terminus and CC central portion of alphab-crystallin and the C-terminal tail of HSP27. CC regions from HSP90, HSP70 and HSP60 families as well as from the sHSP C family. The invention also encompasses methods for stabilising proteins CC such as enzymes, therapuetic proteins, diagnostic proteins, reporter CC proteins or antibodies, their fragments or conjugates in an aqueous consultion using hybrid protein chaperones; stabilised protein formulation CC comprise consultion using hybrid protein chaperones; stabilised protein formulation consultions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hybrid protein chaperone; protein stabilisation; heat shock protein; sHSP family; protein aggregation inhibition; cell death inhibition; genome stability pathway inhibition; protein denaturation identification; protein conformation related disease; cardiomyopathy; cataract; neurodegenerative disease; cardiant; ophthalmological; neuroprotective; gene therapy; alphaB-crystallin; wild-type; human; cassette mutagenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New hybrid protein chaperone (e.g. heat shock protein) useful for stabilizing proteins and/or protein activities, or as an agent to protein aggregation, or for treating diseases involving altered p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-APR-2002; 2002GB-00009334.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-APR-2003; 2003WO-GB001721.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chaperone; nucleic acids and vectors encoding a hybrid protein chaperone; and the coexpression of a recombinant protein of interest and a hybrid protein chaperone. The hybrid protein finiterest and a hybrid protein chaperones are useful as agents to prevent protein aggregation, as inhibitors of cell death and genome stability pathways, for identification of proteins that are in the process of unfolding, for the treatment of diseases involving altered protein conformations (e.g., cardiomyopathies, cataracts or neurodegenerative diseases, or for the manufacture of a medicament for the treatment of such diseases. The present sequence represents a wild-type human alphabacrystallin DNA sequence. The T at position 497 was mutated to G (see ADE75374) to generate a unique Aval restriction site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule, and (b) determining the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Old LJ,

29-SE
                  comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
                                                                                                                                                                                                              neoplastic agent. The method involves captures - neoplastic agent. The method involves captures - neoplastic activity, determining a change in to be tested for anti-neoplastic activity, determining a change in to be tested for activity, determining a change in the captures of at least one gene (I) of a signature gene set, where (I) expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (given in ABL6164) comprises a sequence (S) selected from 8447 sequences (Given in ABL6164) comprises a sequence (S) selected from 8447 sequences (Given in ABL6164) comprises a sequence (S) selected from 8447 sequences (Given in ABL6164) comprises a sequence (S) selected from 8447 sequences (Given in ABL6164) comprises (Given in ABL6164) comprises (Given in ABL6164) comprises (Given in ABL6164) comprises (Given in A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-JUN-2000;

Screening for anti-neoplastic agent involves exposing agent to be tested for anti-neoplastic activity, and in expression of a gene of a signature gene set. g cells to a determining t chemical ga change

Claim 1; SEQ ID NO 764; 44pp; English.

The present invention describes a method (M1) for screening for an antiCC neoplastic agent. The method involves exposing cells to a chemical agent
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95 identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC the coll carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

The methods are useful to present information identifying the expression level in a tissue or cells, by comparing the expression level of genes given in the specification in the tissue or cells to the level of expression of gene in the database, and displaying the expression levels of at least one gene in the tissue or cell sample compared to the expression level in BPH. Agents using (II) are useful for treating BPH or
                                                                                                                                                                                             from patients exhibiting different clinical states of prostate hyperplasia as compared to normal prostate tissue. (I) comprises detecting the expression levels of one or more genes in prostate cells from the subject that are differentially regulated compared to normal prostate cells. (II) comprises preparing a first gene expression profile of BPH cells or BPH-like cell population, exposing the cells to the agent preparing a second gene expression profile of the agent exposed cells, and comparing the first and second gene expression profiles. (I) is useful for diagnosing the onset or progression of BPH. (II) is useful for identifying an agent that modulates the onset or progression of BPH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 progression of benign prostatic hyperplasia (BPH), or screening (II) for or identifying an agent that modulates the onset or progression of BPH. The method is based on changes in gene expression in BPH tissue isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells from patient that are differentially regulated compared to normal prostate

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An OFF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of
                                                                                                                                                                                                                                                New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                Dumas Milne Edwards
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-SEP-2000.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3′ untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5′ ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5′ UTR is rarely included. 5′ ESTs are derived from mRNAs with intact 5′ ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5′ ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                   New nucleic acid that is a 5' expressed sequence obtaining cDNAs and genomic DNAs that correspond diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               libraries. Such ESTs are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. ESTs are derived from mRNAs with intact 5' ends and can therefore be us to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 911 BP; 221 A; 260 C;
